

# ANDROID: Key Settings to enable correct & safe running

## 1. LOCATION SETTING

When you first install the MyTeamSafe app the onboarding screens ask you to give the app permission to use Locations.

If for some reason locations aren't being recorded the please check the following settings on the smartphone.

If the location permission has been removed then when you load the app you will see the following screen. You must click **ALLOW**

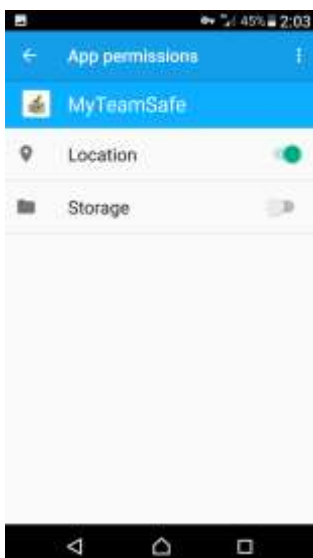

You can also check your permissions in Android Settings Menu.

Different Android versions have different ways to get to permission settings but they should look something similar to this.

### APP Permissions

Ensure Location is switched **ON**.

### Locations Permissions; Ensure Location is set to **ON**.

Battery saving is usually enough. High accuracy uses more battery but provides true GPS accuracy.
